1. GENERAL

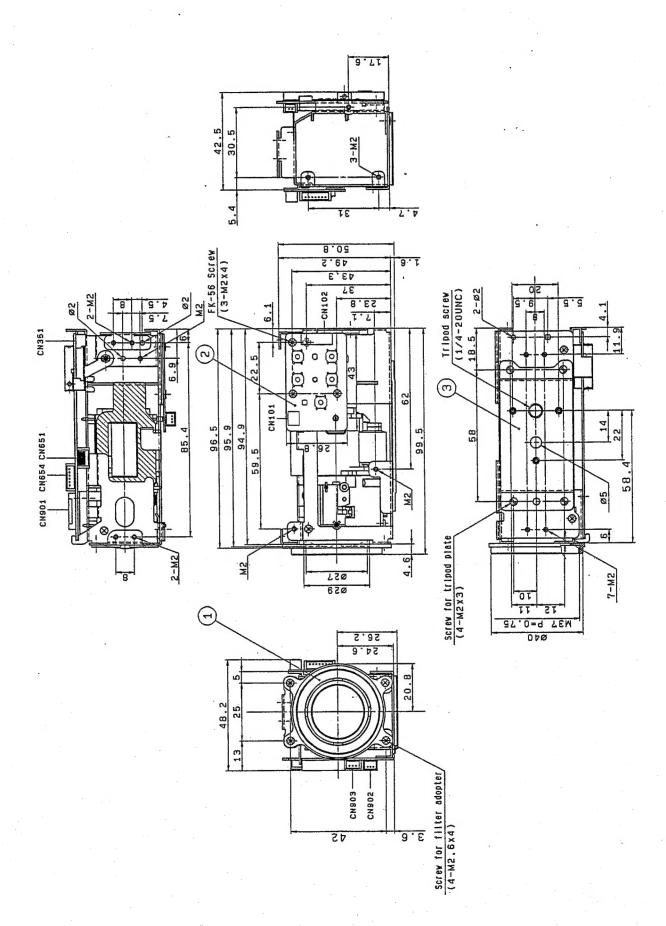

1. Summary

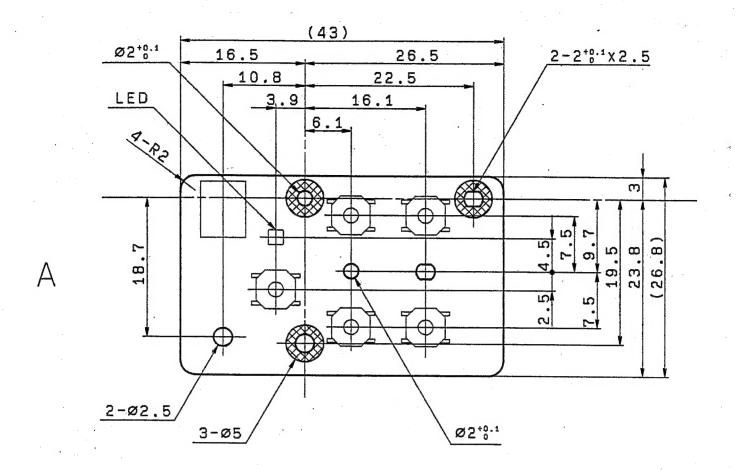

EVI-310 (NTSC) / EVI-311 (PAL) is a super compact color CCD camera block with 8 times zoom, high speed auto focus lens installed. A 1/3 inch, 380,000/440,000 pixels CCD is used and more than 460 TV lines, high resolution is achieved. Not only controlling zoom and focus but also auto tracing, one push, pre-set white balance are selectable and 17 steps iris, 28 speeds of electronic shutter, and 8 steps of brightness are possible to set by each. Owing to the Bright Control and Exposure Compensation function, various adjustments of brightness is offerable. Furthermore, it is possible to pre-set 6 different camera conditions in advance using Position Pre-set function. EVI-310/311 uses DSP (Digital Signal Processor) that enables digital controlling of each camera functions. Composite and Y/C outputs are available.

FK-56 Board is mounted at the side of the EVI-310/311 when it is delivered. They are connected by 3P-3P harness.

♦ CN101:3P

For connecting with EVI-310/311 (CN903)

1. ZOOM/FOCUS SW

on board connector: SMK CGP4703-0110

2. GND

supplied connectors housing: SMK CGP1203-0101

AF ON LED

supplied connectors receptacle: SMK CTA1126-0101

♦ CN102:7P

For controlling zoom and focus

1. ZOOM WIDE

JST

2. ZOOM TELE

S7B-ZR-SM3A-TF

- 3. AF ON/OFF
- 4. FOCUS NEAR
- 5. FOCUS FAR
- 6. GND
- 7. NC

6. Functions

EVI-310/311 offers the following functions. For the details to control each function, please refer to Section 7 and 8.

Zoom

Owing to a high speed stepping motor as a zoom motor, the fastest 1.5 sec. zooming is achieved from tele end (47.2mm max.) to wide end (5.9mm max.) with 8 times zoom. Tele/wide manual control is available.

Focus

EVI-310/311 uses Inner focus system that gives a quick and stable tracking. By detecting high frequency elements from the video signal, it focuses to the subject with much brightness and contrast in the measuring area of the center screen. Auto focus is available 1cm close-up from the lens front (in case of wide end) to infinite. The closer to be Tele side, the longer the minimum focus distance will be. When in tele end, it is focusable from 90 cm from the lens front.

For the following functions, controlling the functions with an additional circuit, ECCP, RS232C is necessary. When the following functions are not used, the first settings (factory settings) are auto white balance, 1/60 sec. shutter speed, auto iris, and AGC.

White balance

♦ Auto White Balance

TTL Auto Tracing White Balance System is used that gives a faithful color reproduction to the subject by calculating the color information of the whole screen. To prevent the subject from being all white by operating white balance function blindly, the operation range of auto white balance function is limited. This function also judges whether indoor or outdoor from the brightness and changes the withdraw range of auto white balance accordingly.

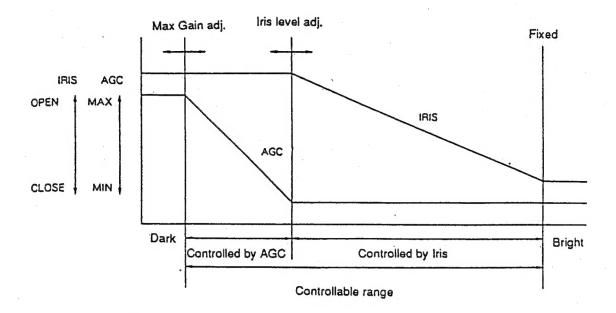

♦ Pre-set

Indoor fix (3200K) and outdoor fix (5800K) are selectable.

One push white balance

One push white balance function is a function to withdraw to white forcibly and capture an image under one fixed color temperature condition. Natural and faithful color is achieved without any influence from the changable conditions around the subject. When setting, send one push white balance trigger with white subject over half of the whole image occupied. The data of the one push white balance is cleared when turning off power supply. If power supply turned off once, re-set one push white balance.

Bright Control is an adjustment function of the brightness with the combination of gain and iris. When in darkness, gain controls exposure and when in the brightness, iris controls exposure. Since both gain and iris are fixed, this function is useful when capturing images under fixed brightness condition. The status at auto exposure will be held once when changing the mode from auto exposure to Bright Control.

| STEP | GAIN | IRIS | STEP | GAIN | IRIS | STEP | GAIN | IRIS |
|------|------|------|------|------|------|------|------|------|
| 1 | 18dB | F1.4 | 9 | 0dB | F2 | 17 | 0dB | F8 |
| 2 | 15dB | F1.4 | 10 | 0dB | F2.4 | 18 | 0dB | F9.6 |
| 3 | 12dB | F1.4 | 11 | 0dB | F2.8 | 19 | 0dB | F11 |
| 4 | 9dB | F1.4 | 12 | 0dB | F3.4 | 20 | 0dB | F14 |
| 5 | 6dB | F1.4 | 13 | 0dB | F4 | 21 | 0dB | F16 |
| 6 | 3dB | F1.4 | 14 | 0dB | F4.8 | 22 | 0dB | F19 |
| 7 | 0dB | F1.4 | . 15 | 0dB | F5.6 | 23 | 0dB | >F22 |
| 8 | 0dB | F1.7 | 16 | 0dB | F6.8 | | | |

note: F number of Step 23 is larger than F22 but it doesn't become CLOSE.

Exposure compensation

Exposure Compensation function is a brighter/darker adjustment function of the brightness when in auto (auto iris, AGC). The brightness when Exposure Compensation is OFF (auto iris, AGC) is a base (step 0) and each 7 steps to brighter and darker than the base condition (step 0) are adjustable. Iris and gain are in auto mode.

Shutter priority mode

Corresponding to selected electronic shutter speed (28 speeds), iris is adjusted automatically. Gain is in auto setting.

| 1 | 1/60 (PAL:1/50) | 11 | 1/300 | 21 | 1/1750 |
|----|-------------------|----|--------|----|---------|
| 2 | 1/60 | 12 | 1/350 | 22 | 1/2000 |
| 3 | 1/75 | 13 | 1/425 | 23 | 1/2500 |
| 4 | 1/90 | 14 | 1/500 | 24 | 1/3000 |
| 5 | 1/100 | 15 | 1/600 | 25 | 1/3500 |
| 6 | 1/125 (PAL:1/120) | 16 | 1/725 | 26 | 1/4000 |
| 7 | 1/150 | 17 | 1/850 | 27 | 1/6000 |
| 8 | 1/180 | 18 | 1/1000 | 28 | 1/10000 |
| 9 | 1/215 | 19 | 1/1250 | | |
| 10 | 1/250 | 20 | 1/1500 | | , |

Auto flickerless function

EVI-310/311 has auto flickerless function which reduces flicker automatically caused under fluorescent light in the area where electric wave frequency is different from the camera. To set to complete flickerless, set shutter speed to 1/100 sec.

= Iris priority mode

Corresponding to selected iris position (17 different positions), shutter speed is adjusted automatically. Gain is in auto mode.

| 1 | F19 | 9 | F4.8 |
|----|------|----|------|
| 2 | F16 | 10 | F4 |
| 3 | F14 | 11 | F3.4 |
| 4 | F11 | 12 | F2.8 |
| 5 | F9.6 | 13 | F2.4 |
| 6 | F8 | 14 | ·F2 |
| 7 | F6.8 | 15 | F1.7 |
| 8. | F5.6 | 16 | F1.4 |

Manual gain is set (8 different level). Shutter is in normal mode (1/60: NTSC, 1/50 PAL) and iris is in auto mode.

| 1 | -3dB |
|---|-------|
| 2 | 0dB |
| 3 | +3dB |
| 4 | +6dB |
| 5 | +9dB |
| 6 | +12dB |
| 7 | +15dB |
| 8 | +18dB |

Position Pre-set

Using Position Pre-set function, 6 different camera conditions are pre-setable. With this useful function, camera is possible to be set as required instantly without adjusting zoom position, focus (auto, manual position), white balance, iris, gain, shutter speed, and bright control each time.

♦ Setting

After setting a camera functions as required, pre-set the camera to a preferable position number. When the position number is selected, each function will be set as memorized in advance. Once it is reset, the functions will be in full auto mode.

Factory Pre-set

With Position Pre-set function, the camera functions before pre-set and after reset are in full auto mode. However, with Factory Pre-set function, it is possible to keep the data semipermanently by writing the data into internal nonvolatile memory. Using this function, each camera functions before pre-set, after reset, and when turning on power supply ,when using position pre-set, are setable as desired. Since a special tool is necessary, please contact us for the details.

7. Function Control

Each functions are controlled by different method. Please refer to Section 8 for the details of function controlling method.

| Control method | FK-56 | RM-95 | VISCA | ECCP | Extra |
|-----------------------------------|-------|-------|---------|------|---------|
| Controlable functions | | | /RS232C | | Circuit |
| Zoom Tele/Wide | 0 | 0 | 0 | 0 | · |
| Zoom Position (Preset/Detect) | | | 0 | 0 | |
| Focus Auto/Manual | 0 | 0 | 0 | 0 | |
| Focus Far/Near | 0 | 0 | 0 | 0 | |
| Focus Position (Preset/Detect) | 1 | | 0 | 0 | |
| White Balance mode selection | | | 0 | 0 | 0 |
| White Balance mode detection | | | 0 | 0 | |
| Bright Control Up/Down | | | 0 | 0 | 0 |
| Exposure Compensation Up/Down | | | 0 | 0 | Ō |
| Exp. Compensation (Preset/Detect) | | | 0 | 0 | |
| Shutter Priority Up/Down | | | 0 | 0 | |
| Shutter Priority (Preset/Detect) | | | 0 | 0 | |
| Iris Priority Up/Down | | | 0 | 0 | |
| Iris Priority (Preset/Detect) | | | 0 | 0 | |
| Gain Priority Up/Down | | | 0 | 0 | |
| Gain Priority (Preset/Detect) | | | 0 | Ō | |
| Position Preset (Preset/Reset) | | | 0 | 0 | 0 |
| Position Preset (Detect) | | | 0 | 0 | · |

8. Operation

Operation

♦ Power Supply

Please supply DC 7.5 \pm 1.5V (2.8W) to CN 351 with accessory harness. Red (No.1) is plus (+).

- Video Signal Output Composite signal and YC video signal are output at CN 654.
- ♦ Backup Switch
 - When backup switch is ON, positions of zoom and focus is memorized to the camera.
 - Since backup battery is re-chargeable, exchanging is unnecessary.
 - Backup lasts for two weeks when the battery is full charged.
 - Factory setting is OFF.

Function Controlling

♦ FK-56 board

This board is used to control a lens. FK-56 board is removable from side frame of the camera.

- Auto Focus ON/OFF
 - Each time AF ON/OFF switch is pushed, ON/OFF is switched, and LED is lighted when Auto Focus is ON.
 - When Auto Focus is OFF, the focus is adjustable by pushing Focus FAR or Focus NEAR switches. Adjustment is not available when Auto Focus is ON.
- Zoom Adjustment

Zoom adjustment is available by pushing TELE or WIDE switches.

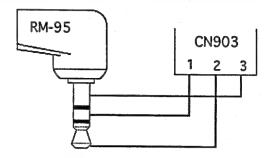

♦ ECCP (EVI Camera Control Protocol)

EVI-310/311 has ECCP terminals with which each camera function is controlled directly by serial communications (9600bits/sec., asyncronous interactive serial communications). It is possible to control the camera and read the camera data. To this ECCP terminals, remote controller (RM-95) and VISCA/RS 232C interface board are connectable. As to the details on ECCP usage, a contract is necessary so please contact us.

With Interface Board/IF-51 (extra charged optional accessary), each camera functions are controllable by RS232C port of a computer. It is possible to control a camera and read the camera data. IF-51 board can be fixed to the side of the camera body. In this case, FK-56 board has to be removed. Zoom and focus are operationable with buttons on IF-51 board. Please contact us for the details on VISCA/RS232C.

♦ Remote Controller - RM-95

With a remote controller, RM-95 for Sony consumer Camcorders, zooming and focus controlling are possible. Please connect to CN903 (3P) as below.

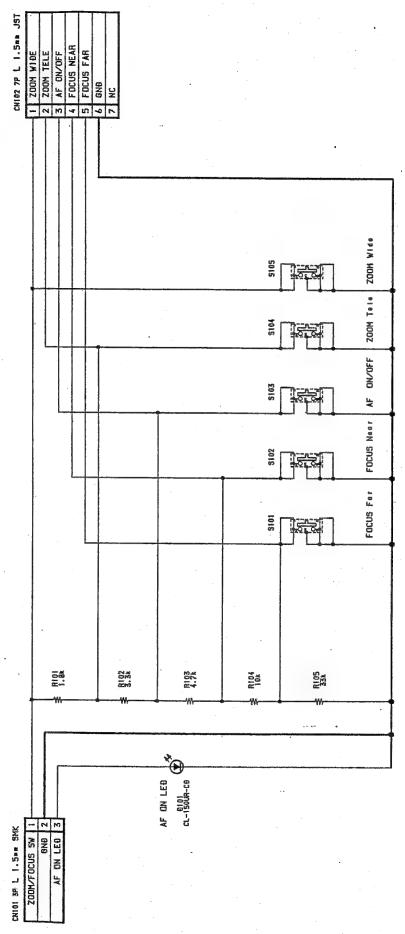

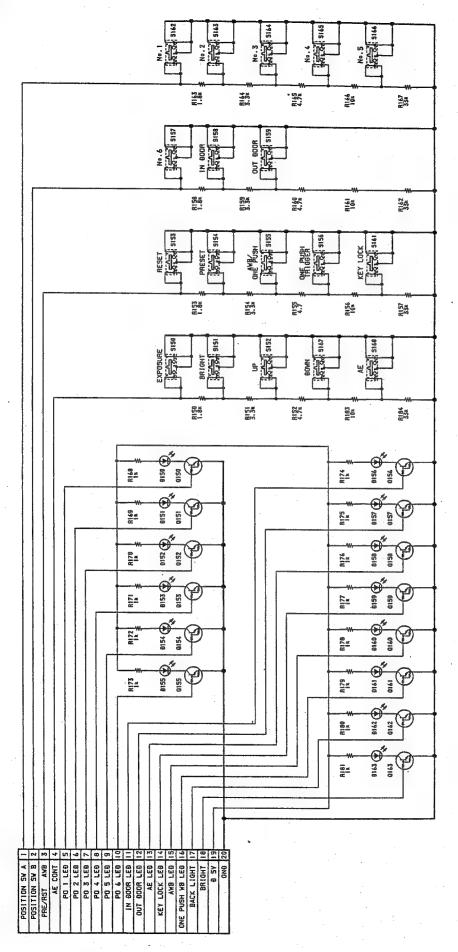

♦ Controlling with extra circuit

By adding a switch circuit, the following function will be controllable. Use CN901 (20P) and accessory 20P flexible cable.

note: Please refer to the circuit daigram (page 15)

| C: | N901:20P | | | Controlable Function |

| 10. | PO 6 LED | 20. | GND | |
| | | | | |

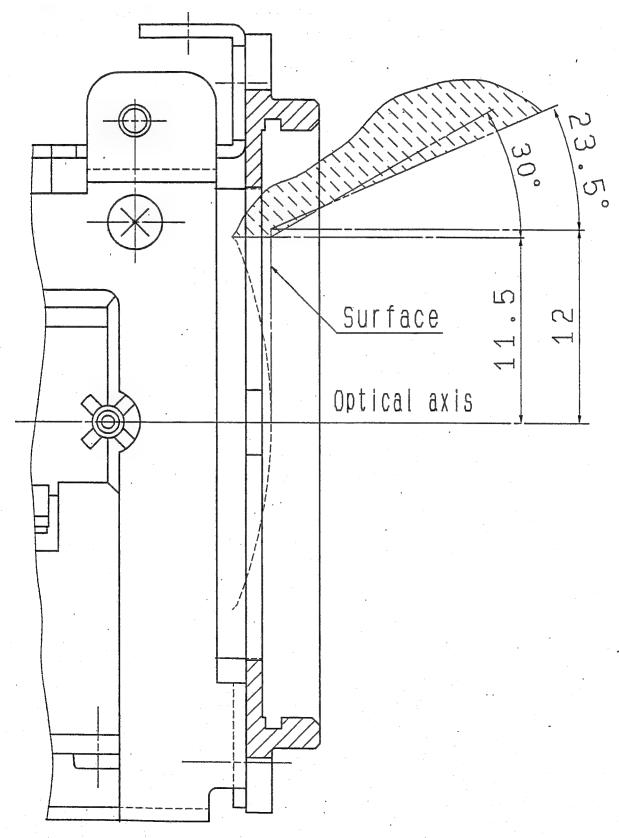

♦ Installation

For installation, use tripod screw below or M2 screws on chasis.

It is possible to remove the plate for tripod.

In case of designing housing etc., please refere to the following drawing.

10. Note

- Do not add any force to bend printed circuit boards.
- Do not add voltage with over regular spec. (Max. 9V)
 Heat will be caused when using 9V voltage but it is not abnormal.
- To prevent electrostatic discharges, please use earth band when touching the boards. Please use untistatic processed material for packing.
- Please use a carton box shipped from Sony when you ship.
- A clatter might be heard when shaking a camera with power supply turned off. However, this clatter is caused by vibration of lenear motor inside of the lens. No quality problem.

11. Others

External synchronization is not available. RGB output is not available.

12 Optional Accessary

♦ Interface Board / IF-51

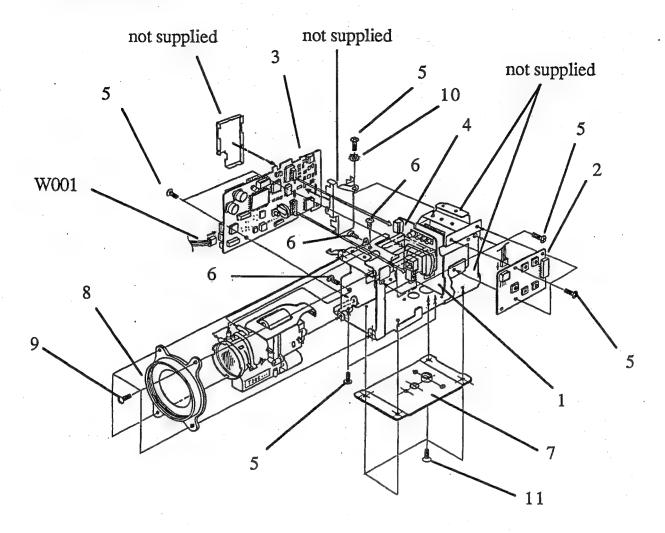

By using Interface Board/IF-51, it is possible to control camera functions through RS232C port of computers. IF-51 is possible to mount at the side of the camera. In this case, FK-56 Board should be taken off. Zoom and focus are possible to control also by the button on IF-51. Please ask for more details.

♦ Conversion lens

It is possible to adopt conversion lens (Φ 37) such as wide conversion lens or close up lens of consumer Camcorder.

3. ELECTRICAL PARTSLIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX and -X mean standardized parts, so they may have some difference from the original one.
- RESISTORS
 All resistors are in ohms.
 METAL:Metal-film resistor.
 METAL OXIDE: Metal oxide-film resistor.
 F:nonflammable
- Items marked "*" are not stocked since they are seldom required for routine service.
 Some delay should be anticipated when ordering these items.
- SEMICONDUCTORS
 In each case, u: μ, for example:
 uA..: μA.. uPA.: μPA.
 uPB.: μPB.. uPC.: μPC.. uPD..: μPD.
- CAPACITORS uF: µF
- COILS uH: µH

The components identified by mark A or dotted line with mark. A are critical for safety.

Replace only with part number specified.

When indicating parts by reference number, please include the board.

Description

Remark

1-751-538-11 CABLE, FLAT (0.5MM PITCH)

- 1-951-471-11 HARNESS (EC-51)
- 1-951-473-11 HARNESS (DC-57) 1-951-475-11 HARNESS (VO-50)

Ref. No. Part No.

3-948-061-02 COVER, Z GEAR

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX and -X mean standardized parts, so they may have some difference from the original one:
- RESISTORS
 All resistors are in ohms.
 METAL:Metal-film resistor.
 METAL OXIDE: Metal oxide-film resistor.
 F:nonflammable
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
 SEMICONDUCTORS
- In each case, u:μ, for example: uA..: μA.. uPA..: μPA.. uPB..: μPB.. uPC..: μPC.. uPD..: μPD..
- CAPACITORS
 uF: µF
- COILS uH: μH

The components identified by mark A or dotted line with mark. A are critical for safety.
Replace only with part number specified.

When indicating parts by reference number, please include the board.

| J-6 | Siemens star | J-6080-875-A | For checking the flange back |
| J-7 | Measuring pin tool for camera section | J-6082-139-A | For adjusting the camera section |
| J-8 | Extension cable(30P,0.8mm) Note 2 | J-6082-189-A | For extension between the LD-62 board |
| | | | (CN752) and VC-128 board (CN652) |
| J-9 | Extension cable(18P,0.8mm) | J-6082-170-A | For extension between the CD-99 board |
| | | | (CN721) and VC-128 board (CN601) |
| J-10 | Video / S video out cable | J-6082-293-A | For checking the video signal |
| J-11 | Extension cable 3 | J-6082-291-A | For adjusting remote commander (J-5) |
| J-12 | FK-57 board | J-6082-292-A | For function check |

Note 1:If the processor IC in the adjusting remote commander is not the new microprocessor (UPD7503G-C56-12), the pages cannot be switched. In this case, replace with the new micro processor (8-759-148-35).

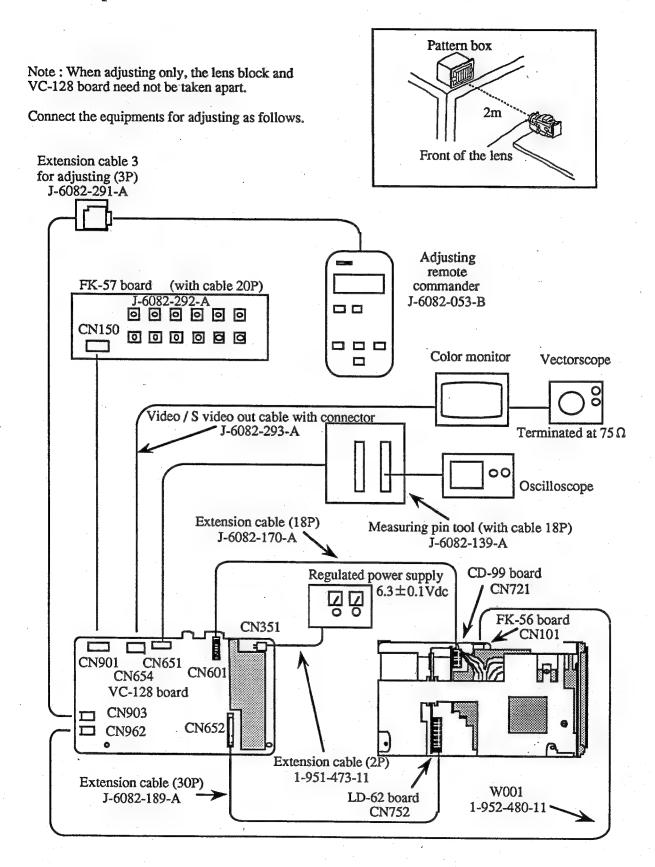

Note 2:Preparation before used

7. ADJUSTMENTS

7-1-1. Preparation

7-1-2. Precautions

1. Switch settings

Adjust the back up switch is OFF (VC-128 board S901) to the following positions, and adjust a, unless specified otherwise.

2. Adjusting Procedure

Adjust in the given order.

3. Subject

- Color bar chart (Standard picture frame)
 Adjust the picture frame as shown in Fig. 7-4. if adjustments are performed using the color bar chart.
 (Standard picture frame)
- White pattern (Standard picture frame) Remove the color bar chart from the pattern box, and adjust the zoom lever so that the white pattern is the same size and at the same position as the color bar chart (Standard picture frame).

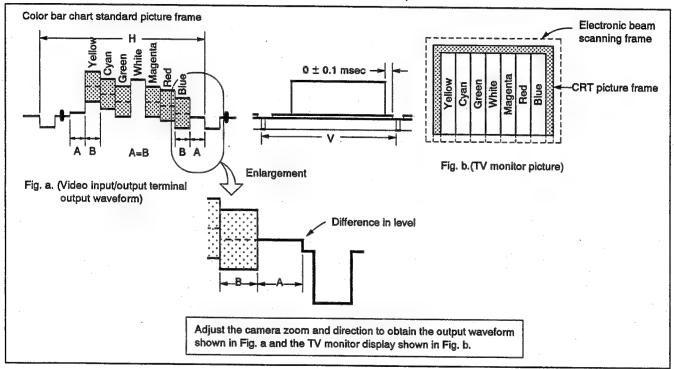

Fig. 7-4.

Chart for flange back adjustment Combine a white A0 size (1189 mm× 841 mm) imitation Japanese vellum to a black one, and make the chart shown in Fig. 4-5.

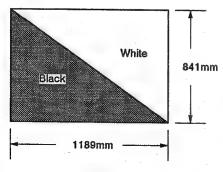

Fig. 7-5.

Note: Use non-reflecting and matted imitation Japanese vellum that are above A0. When making the chart, make sure that the line between the black and white is even.

7-1-3. Adjusting Remote Commander

Adjusted by changing the constant or coefficient of the digital signal processing calculation, or modifying the output voltage of the EVR IC (VC-128 board IC654, 905). This is controlled by the camera micro processor (VC-128 board IC653, 903), which reads the data written in the nonvolatile memory (VC-128 board IC651, 901: EEPROM), and transmits it to the digital signal processing circuit and EVR.

To perform adjustments, adjustment data written in the nonvolatile memory must be rewritten, using the adjusting remote commander.

The adjusting remote commander uses the remote commander signal line (LANC) to communicate mutually with the camera microprocessor. The page, address and the up/down commands of the data are transmitted from the adjusting remote commander to the camera micro processor. And, the page, address, and data are transmitted for the vice versa.

1. Using the adjusting remote commander

- Connect the adjusting remote commander to the ECCP terminal (VC-128 board CN903).
- Adjust the HOLD switch of the adjusting remote commander to "HOLD" (SERVICE position).

If it has been properly connected, the LCD on the adjusting remote commander will display as shown in Fig. 7-6.

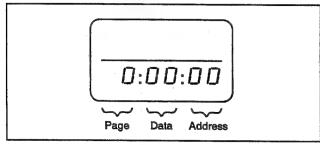

Fig. 7-6.

- 3) Operate the adjusting remote commander as follows.
 - Changing the page
 The page increases

The page increases when the EDIT SEARCH+ button is pressed, and decreases when the EDIT SEARCH-button is pressed. There are altogether 16 pages, from 0 to F.

| Hexadecimal notation | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | A | В | С | D | Е | F |
|-----------------------------------|---|---|---|---|---|---|---|---|---|---|----|----|----|----|----|----|
| LCD Display | 0 | ! | 2 | 3 | 4 | 5 | 8 | 7 | 8 | 9 | R | Ь | c | d | Ε | F |
| Decimal notation conversion value | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 |

Table 7-1.

· Changing the address

The address increases when the FF (→) button is pressed, and decreases when the REW (←) button is pressed. There are altogether 256 addresses, from 00 to FF.

• Changing the data (Data setting)

The data increases when the PLAY (►) button is pressed, and decreases when the STOP (■) button is pressed.

There are altogether 256 data, from 00 to FF.

Writing the adjustment data

The PAUSE button must be pressed to write the adjustment data (F page) in the nonvolatile memory. (The new adjustment data will not be recorded in the nonvolatile memory if this step is not performed.)

 Select page:6, address:00, and set the data to 01. The write protect of page F will be released. (Addresses:01 to DF on page F.)

Select page:1, address:00, and set the data to 01. The write protect of page D will be released.

The adjustment can now be performed.

5) After completing all adjustments, turn off the main power supply (6.3V) once. This releases the adjustment mode (other than page F).

2. Precautions upon using the adjusting remote commander

Mishandling of the adjusting remote commander may erase the correct adjustment data at times. To prevent this, it is recommended that all adjustment data be noted down before beginning adjustments and new adjustment data after each adjustment.

7-1-4. Page F Address List

Note 1: The data already listed in the adjustment data memo column are fixed values.

Note 2: The adjustment data initial values are values just after executing "Page F Data Initialization" and "Page F Data Modification". They are different from the values after executing all adjustments.

Note 3: The < > contains the initial data for AF micro processor versions 1 and 2. Refer to "Page F Data Input" for how to distinguish these versions.

Note 4: The () contains the initial data for camera microprocessor versions 1 and 2. Refer to "F Page Data Modifications" for how to distinguish these versions.

Note 5: In some cases, data have been input to the page F addresses D0 to EF. This has no relation to the adjustments.

| Address | | Function | Adjustment data | | |
|---------|------------------|---|------------------|-----------------------|--|
| Address | Name | [] contains the adjustment voltage output terminal | initial value | Memo column | |

7-1-6. Page 6, Page 2 Address List

The camera adjustment mode can be set by setting the data in the following table to page 6 or 2. (The data of these pages can be set temporarily. When the main power supply (6.3V) is turned off, the original values (normal value) are returned. Therefore, these adjustment modes can be released easily by turning off the main power supply.)

(Example) By setting data: 01 to page: 6, address: 00, the write protect of page F, addresses 01 to DF can be released.

1. Page 6

| Address | Adjustment Mode | Data | Function |

| 01 | 38 | VH address H | | Title horizontal/vertical position (H) |
| 01 | 39 | Data transmission to SG | 00 | Normal |
| | | | 01 | Data transmission to SG begins |

Note: The category is specified by the data of page 2, address 00.

(Example) To specify category 01, adjust to 01 the data of page 2, address 00.

Table 7-4.

7-1-7. Adjustment Connector.

Most of the measuring points for the camera section adjustment are concentrated at CN651 of the VC-128 board. Connect the oscilloscope, etc. via the measuring pin tool (J-6082-139-A). The following table lists the pin numbers and the signal names of CN651.

| Pin No. | Signal Name | Pin No. | Signal Name |
|---------|-------------|---------|-------------|
| 1 | D5V | 2 | ECCP SIG |
| 3 | ZOOM SW | 4 | CAM SI |
| 5 | CS EEPROM | 6 | CAM SO |
| 7 | LI 3V | 8 | CAM SCK |

| 15 | PG CONT | 16 | GND |
| 17 | VIDEO OUT | 18 | YOUT |

Table 7-5.

7-1-8. Data Processing

For some adjustments, the display data of the adjusting remote commander (hexadecimal numeral) must be calculated in order to obtain the adjustment data. In this case, after converting the hexadecimal numeral to a decimals numeral once, calculate and convert the result to a hexadecimal numeral, and use it as the adjustment data. Table 7-6 is the hexadecimal-decimal calculation table.

| decimal-Decimal Conv | ecimal-Decimal Conversion Table | | | | | | | | 2 | | | | | | | |
|--|---------------------------------|-----|-----|-----|------|-----|-----|-----|-----|-----|----------|--------------------------|--------------------------|----------|-------------------|-----|

| F(F) | 240 | 241 | 242 | 243 | 244 | 245 | 246 | 247 | 248 | 249 | 250 | 251 | 252 | 253 | 254 | 255 |

Note: () contains the display of the adjusting remote commander.

(Example) When the DDS display or the display of adjusting remote commander is BD (b d).

As the upper digit of the hexadecimal numeral is B(b), and the lower digit is D (d), the meeting point "189" of ① and ② in the above table is the decimal numeral to be calculated.

Table 7-7.

7-2. CAMERA SYSTEM ADJUSTMENTS

1. Adjusting points when replacing main parts

When replacing the CCD imager or lens block, adjust the items indicated by \bigcirc in the following table.

| | When CCD imager is replaced | When lens block is replaced |
|---|-----------------------------|-----------------------------|
| V SUB adjustment | 0 | |
| V RG adjustment | 0 | |
| HALL adjustment | | 0 |
| CCD imager correction data writing | 0 | |
| Flange back adjustment | 0 | 0 |
| IRIS IN/OUT adjustment | 0 | 0 |
| MAX GAIN adjustment | 0 | |
| Pre-white balance adjustment | 0 | , |
| Auto white balance balance reference data input | 0 | |
| Auto white balance adjustment | 0 | |
| Color reproductivity adjustment | 0 | |
| Linear matrix adjustment | 0 | |

2. Power supply voltage check (VC-128 board)

| Arbitrary |
|-------------------|
| Digital voltmeter |
| |
| CL360 or L667 |
| 4.90 ± 0.15 Vdc |
| |
| CL361 or L663 |
| 3.95 ± 0.15 Vdc |
| |
| CL359 or L666 |
| 4.85 ± 0.15 Vdc |
| |
| CL353 |
| 5.0 ± 0.5 Vdc |
| |
| CL355 or L664 |
| 15.0 ± 0.4 Vdc |
| |
| CL356 or L665 |
| -8.5 ± 0.5 Vdc |
| |

Checking Method:

1) Check that each power supply voltage satisfies the specified value.

If not, refer to "Video circuit, Power supply block adjustment".

3. Page F data modification

Some parts of the data (initial data) automatically written on page F by the initialization of the page F data will differ according to the version of the camera micro processor. Change the data manually, and arrange it.

Modification method:

| Order | Page | Address | Data | Procedure | Conditions |
|-------|------|--------------------|------|--|------------|
| 1 | 6 | 00 | 01 | Releasing of page F protect. | |
| 2 | F | 00(SET ID) 3F | | | |
| | | 0C(LOWLIGHT START) | 6A | Set each data to each address, and press the | |
| | | 71(AE REFH) | 1B | PAUSE button. | |
| | | A3(MF SPEED) | 48 | | |

Remarks: The versions of the camera micro processor (VC-128 board IC653) and the AF micro processor (LD-62 board IC751) mode micro processor (VC-128 board IC903) can be distinguished using the following table.

• Camera Micro processor

| Page | Address | Data | |
|------|---------|------|-----------|
| 6 | 10 | 10 | Version 1 |

• AF Micro processor

| Page | Address | Data | |
|------|---------|------|-----------|
| 6 | 20 | 14 | Version 1 |
| | | 10 | Version 2 |

Mode Micro processor

| Page | Address | Data | |
|------|---------|----------|------------------------|
| 1 | 01 | 00 20 | Version 1 Version 2 |
| | | | |

Note: Check that camera micro processor version 1 and AF micro processor version 2 mode micro processor version 2 have been provided as micro processors for correction.

4. 28 MHz origin oscillation adjustment (VC-128 board)

| Subject | Not required |
|----------------------|-------------------|
| Measurement Point | JL651 (side B) |
| Measuring Instrument | Frequency counter |
| Adjusting Element | CT601 |
| Specified Value | 14318181 ± 71 Hz |

Adjusting method:

| Order | Adjusting element | Procedure | Conditions |
|-------|-------------------|---|------------|
| 1 | CT601 | Adjust the oscillation frequency to the | |

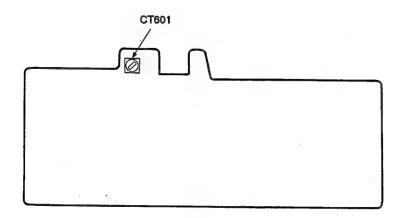

Fig. 7-7.

5. V SUB adjustment (VC-128 board)

| Subject | Not required |
|----------------------|--------------------------------------|
| Measurement Point | Pin (3) of CN651 (V SUB CHK) |
| Measuring Instrument | Digital Voltmeter |
| Adjustment Page | F |
| Adjustment Address | 06 (V SUB) |
| Specified Value | (Imager displayed voltage) ± 0.1 Vdc |

Adjusting method:

| Order | Page | Address | Data | Procedure | Conditions |
|-------|------|---------|------|--|--|
| 1 . | 6 | 00 | 01 | Releasing of protect. | |
| 2 | F | 06 | | Change the data with the PLAY and STOP buttons, and adjust the voltage of Pin (3) of CN651 to the specified value. | Mary and the second second second second second second second second second second second second second second |
| 3 | F | 06 | | Press the PAUSE button. | |

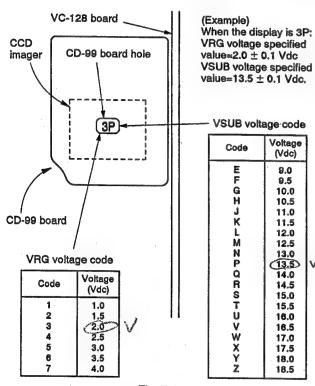

Fig. 7-8.

Related Adjustments:

"MAX GAIN adjustment", "Pre-white balance adjustment", "Auto white balance data input", "Auto white balance adjustment", "Color reproductivity adjustment", "Linear matrix adjustment".

6. VRG adjustment (VC-128 board)

| Subject | Not required |
|----------------------|--------------------------------------|
| Measurement Point | Pin (b) of CN651 (PG CONT) |
| Measuring Instrument | Digital Voltmeter |
| Adjustment Page | F |
| Adjustment Address | 07 (VRG) |
| Specified Value | (Imager displayed voltage) ± 0.1 Vdc |

Adjusting method:

| Order | Page | Address | Data | Procedure | Conditions |
|-------|------|---------|------|--|------------|
| 1 | 6 | 00 | 01 | Releasing of protect. | |
| 2 | F | 07 | | Change the data with the PLAY and STOP buttons, and adjust the voltage of Pin (f) of CN651 to the specified value. | |
| 3 | F | 07 | | Press the PAUSE button. | |

7. CCD imager correction data writing

| Subject | Not required |
|--------------------|-----------------------|
| Adjustment Page | F |
| Adjustment Address | 1F to 2E (CCD-DEFECT) |

Write the CCD imager correction data in the following cases.

- 1. When the CCD imager has been replaced
- 2. When the camera EEPROM (VC-128 board IC651) has been replaced
- 3. When the page F data has been initialized

In the case of 1, as the CCD imager for repair does not require the correction data, adjust the data of addresses 1D to 2C of page F and those of addresses E0 to EF of page D to "00".

Writing method:

| Order | Page | Address | Data | Procedure | Conditions |
|-------|------|---------|------|--|------------|
| 1 | 6 | 00 | 01 | Releasing of page F protect. | |
| 2 | F | 1F~2E | | Set data 00 to each address, and press the PAUSE button. | |
| 3 | 1 | 00 | 01 | Releasing of page D protect. | |
| 4 | Ď | E0~EF | | Set data 00 to each address, and press the PAUSE button. (Writing the backup data) | |

In the case of 2 and 3, read the CCD imager correction data written on addresses EO to EF in page D and write them in addresses 1F to 2E.

Writing method:

| rder | Page | Address | Data | Procedure | Conditions |
|------|------|---------|------|---|------------|
| 1 | 6 | 00 | 01 | Releasing of page F protect. | |
| 2 | D | E0~EF | | Read the CCD imager correction data. | |
| 3 | F | 1F | | Set the data of address E0 of page D, and press the PAUSE button. | |
| | | 20 | | Set the data of address E1 of page D, and press the PAUSE button. | |
| | | 21 | | Set the data of address E2 of page D, and press the PAUSE button. | |
| | | | | | |
| | | 2E | | Set the data of address EF of page D, and press the PAUSE button. | |

8. HALL adjustment

| Subject | Not required | |
|----------------------|---|--|
| Measurement Point | Lower 2 digits of the data of the page | |
| Measuring Instrument | A displayed | |
| Adjustment Page | F | |
| Adjustment Address | 0A (HALL GAIN) 0B (HALL OFFSET) | |
| Specified Value | 33 to 37 during IRIS OPEN B8 to BC during IRIS CLOSE | |

From IRIS

Adjusting method:

| Order | Page | Address | Data | Procedure | Conditions |
|-------|--------|---------|------|---|-----------------|
| 1 | 6 | 00 | 01 | Releasing of protect. | |
| 2 | 6 | 02 | 03 | Set the HALL DATA display mode. | |
| 3 | 6 F | 01 | 03 | Press the PAUSE button. (Setting the IRIS CLOSE mode) | |
| 4 | F 6 | 0B | 80 | Press the PAUSE button. (HALL OFFSET data initial setting) | |
| 5 | F | 0A | 40 | Read the page A display data (Note 1) and take it as W2. | IRIS CLOSE mode |
| 6 | F | 0A | 30 | Read the page A display data and take it as W1. | IRIS CLOSE mode |
| 7 | F | 01 | 01 | Press the PAUSE button. (Setting the IRIS OPEN mode) | |
| 8 | F | 0A | 30 | Read the page A display data and take it as K1. | IRIS OPEN mode |
| 9 | F | 0A | 40 | Read the page A display data and take it as K2. | IRIS OPEN mode |
| 10 | | | | Convert W1, W2, K1, K2 to decimal numerals, and obtain W1', W2', K1', K2'. (Refer to Table 7-7. "Hexadecimal-Decimal Conversion Table") | |
| 11 | | | | Calculate X1' using the following equations (Decimal calculation). A'=W2'+K1'-W1'-K2' Equation 1 B'=W1'-K1' Equation 2 X1'= $\frac{2128+(48+A')-(16\times B')}{A}$ Equation 3 | |
| 12 | | | | Convert X1´ to a hexadecimal numeral, and obtain X1. (Round off to a whole number) | |
| 13 | F | 0A | | Set the data to X1 (obtained at step 12). | |
| 14 | F | 0A | | Press the PAUSE button. | |
| 15 | F | 0B | | Change the data with the PLAY and STOP buttons, and adjust the DDS display data to 35. | IRIS OPEN mode |
| 16 | 6 | 0B | | Press the PAUSE button. | |
| 17 | . 6 | 01 | 03 | Press the PAUSE button. (Setting the IRIS CLOSE mode) | |
| 18 | | | | If the page A display data is B8 to BC, it indicates the end of adjustments. Perform "Processing after Adjustments". If not, carry out step 19 onwards with the page A display data as W0, | IRIS CLOSE mode |

| Page | Address | Data | Procedure | Conditions |
|------|---------|------|---|-----------------|
| | | | Convert W0 to a decimal numeral, and obtain W0'. | |
| | | | Calculate X2' using the following equations (decimal numeral calculation). C'=W0'-B'-53 | |
| | | | Convert X2' to a hexadecimal numeral, and obtain X2. (Round off to a whole number) | |
| F | 0A | | Set the data to X2 (obtained at step 21). | |
| F | 0A | | Press the PAUSE button. | |
| F | 0B | | Change the data with the PLAY and STOP buttons, and adjust the page A display data to BA. | IRIS CLOSE mode |
| F | 0B | , | Press the PAUSE button. | |
| 6 | 01 | 01 | Press the PAUSE button. (Setting the IRIS OPEN mode) | |
| | | | Check that the page A display data is 33 to 37. | IRIS OPEN mode |

| Order | Page | Address | Data | Procedure | Conditions |
|-------|------|---------|------|--|------------|
| 1 | 6 | 02 | 00 | Releasing of HALL DATA display mode. | |
| 2 | 6 | 01 | 00 | Press the PAUSE button. (Releasing the IRIS CLOSE/OPEN mode) | |

Related Adjustments: "IRIS IN/OUT adjustment".

9. Flange back adjustment

| Subject | Chart for flange back adjustment Placed 2000 ± 5 mm in front of the lens Illuminance: 300 ± 50 lux) | | | |
|----------------------|--|--|--|--|
| Measurement Point | Check the operations on the TV monitor | | | |
| Measuring Instrument | | | | |
| Adjustment Page | F | | | |
| Adjustment Address | 9D (OFF FC), 9E (OFF FC), 9F (LENS WIDE), A0 (LENS WIDE), A1 (LENS TELE), A2 (LENS TELE), A9 (Z PHASE) | | | |

Adjusting method:

| Order | Page | Address | Data | Procedure | Conditions |
|-------|------|---------|------|--|------------|
| 1 | 6 | 00 | 01 | Releasing of protect. | |
| 2 | F | 9D | 00. | Set the initial data, and press the PAUSE button. | |
| | | 9E | 2C | | |
| | | 9F | 00 | | |
| | | A0 | 01 | | |
| | | A1 | E0 | | |
| | | Ą2 | 02 | | |
| | | A9 | 08 | | |
| 3 | | | | Check that the center of the flange back adjustment chart coincides with that of the exposure display at both the zoom lens TELE end and the WIDE end. | |
| 4 | 6 | 21 | | Check that the data is 00. (Flange back adjustable display) | |
| 5 | 6 | 01 | 13 | Press the PAUSE button. | |
| 6 | 6 | 01 | 15 | Press the PAUSE button. This enables adjustments to be carried out automatically. Adjustments are performed at the zoom lens TELE end first, and then at the WIDE end. The adjustment data is automatically input to page: F, addresses: 9D to A2, A9.) | |
| 7 | 6 | 21 | | Check that the data is 01. (Display indicating that flange back adjustment has completed.) | |

Write the data of addresses 9F to A2 on page F onto addresses 56 to 59 on page D. (If this step is not performed, errors will occur in the zoom/focus operation during the position preset function operation.)

| Order | Procedure |
|-------|---|
| 1 | Turn on the main power supply (6.3V). (Out of focus if this is not carried out.) |

10. Flange back check

| Subject | Siemens star (Placed 2m in front of the lens) |
|----------------------|--|
| Measurement Point | |
| Measuring Instrument | Data of page A displayed |
| Specified Value | X-Y=±0123 |

Checking method:

| rder | Page | Address | Data | Procedure | Conditions |
|------|------|---------|------|---|--|
| 1 | | | | Place the Siemens star 2m in front of the lens. | |
| 2 | | | | Adjust the auto lock switch to "Off". | |
| 3 | | | | Adjust the "Brightness" to "Manual", rotate the "Brightness" adjusting dial to + so that the IRIS opens. | FK-57 board S151, S152 |
| 4 | | | | Adjust the luminance intensity for the Siemens star so that the optimum image is obtained. | |
| 5 | | | | Expose the Siemens star at the TELE end. | |
| 6 | | | | Press the "Focus" button, and turn on the auto focus. | |
| 7 | 6 | 02 | 0C | Check that the page A display is 00 0001. (Focusing check) | Auto focus on |
| 8 | | | | Press the "Focus" button and turn off the auto focus. | |
| 9 | | | | Expose the Siemens star at the WIDE end. | |
| 10 | 6 | 00 | 01 | Releasing of protect. | |
| 11 | 6 | 02 | 00 | | |
| 12 | F | 02 | B8 | Press the PAUSE button. (Setting the focus position display mode) | |
| 13 | | | | Read the page A display data and take it as X. (Example) DDS display63 4500 X=6345 | Zoom WIDE end Auto focus off |
| 14 | | | | Press the "Focus" button, and turn on the auto focus. | |
| 15 | 6 | 02 | 0C | Check that the page A display is 00 0001. (Focusing check) | Auto focus on |
| 16 | 6 | 02 | 00 | Read the page A display (focus position display) data and take it as Y. (Example) DDS display63 5B00 Y=635B | Zoom WIDE end Auto focus on Focusing condition |
| 17 | | | | Check that $X-Y=\pm 0123$. $(X'-Y'=\pm 291$ when converted to a decimal numeral) | |

Processing after Checking:

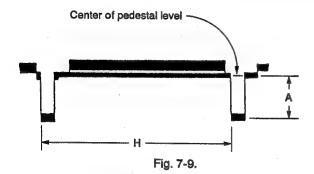

| Order | Page | Address | Data | Procedure |
|-------|------|---------|------|---|
| 1 | F | 02 | 00 | Press the PAUSE button. |
| | | | | (Releasing the focus position display mode) |

11. SYNC level adjustment (S Video) (VC-128 board)

| Subject | Not required |
|----------------------|---|
| Measurement Point | Pin @ of CN654 |
| Measuring Instrument | Oscilloscope |
| Adjustment Page | F |
| Adjustment Address | 08 (VREF-Y) |
| Specified Value | A=286 ± 10 mV (NTSC) A=300 ± 10 mV (PAL) |

Adjusting method:

| Order | Page | Address | Data | Procedure | Conditions |
|-------|------|---------|------|---|----------------------------------|
| 1 | 6 | 00 | 01 | Releasing of protect. | |
| 2 | 6 | 01 | 03 | Press the PAUSE button. (Setting the IRIS CLOSE mode) | |
| 3 | F | 08 | | Change the data with the PLAY and STOP buttons, and adjust the SYNC level to the specified value. | IRIS CLOSE mode Terminate at 75Ω |
| 4 | F | 08 | | Press the PAUSE button. | |

| Order | Page | Address | Data | Procedure | Conditions |
|-------|------|---------|------|---------------------------------|------------|
| 1 | 6 | 01 | 00 | Press the PAUSE button. | |
| | | | | (Releasing the IRIS CLOSE mode) | |

12. Burst level adjustment (S Video) (VC-128 board)

| Subject | Not required |
|----------------------|---|
| Measurement Point | Pin ② of CN654 |

24. Initializing the Page F Data

Note: If the page F data has been initialized, all the adjustments for the camera section must be performed again.

Initializing method:

| Order | Page Address Data Procedure | | | | Conditions |
|-------|-----------------------------|----|----|---|------------|
| 1 | | | | Turn OFF/ON the main power supply (0.0V). | |
| 2 | 6 | 00 | 01 | Release the protect. | |
| 3 | 6 | 01 | 2F | Press the PAUSE button. (Initialization of the data of page F.) Initialization of the data of addresses 01 to EF on page F. | |
| 4 | 6 | 11 | | Check that the data is 01. (Completion of initialization will be indicated.) | |

Note: Initialize page F only when the non-volatile memory (IC651, 901 on the VC-128 board, EEPROM) has been replaced.

· Processing after initializing

| Order | Page | Address | Data | Procedure | Conditions |
|-------|------|---------|------|---|------------|
| 1 | 6 | 01 | 00 | Press the PAUSE button. (Release of initialization mode.) | |
| 2 | | | | Perform "Page F data modification", and perform all the adjustments for the camera section. | |

Related adjustments

All camera section adjustments except the "28 MHz origin oscillation adjustment".

25. Initializing the Page D Data

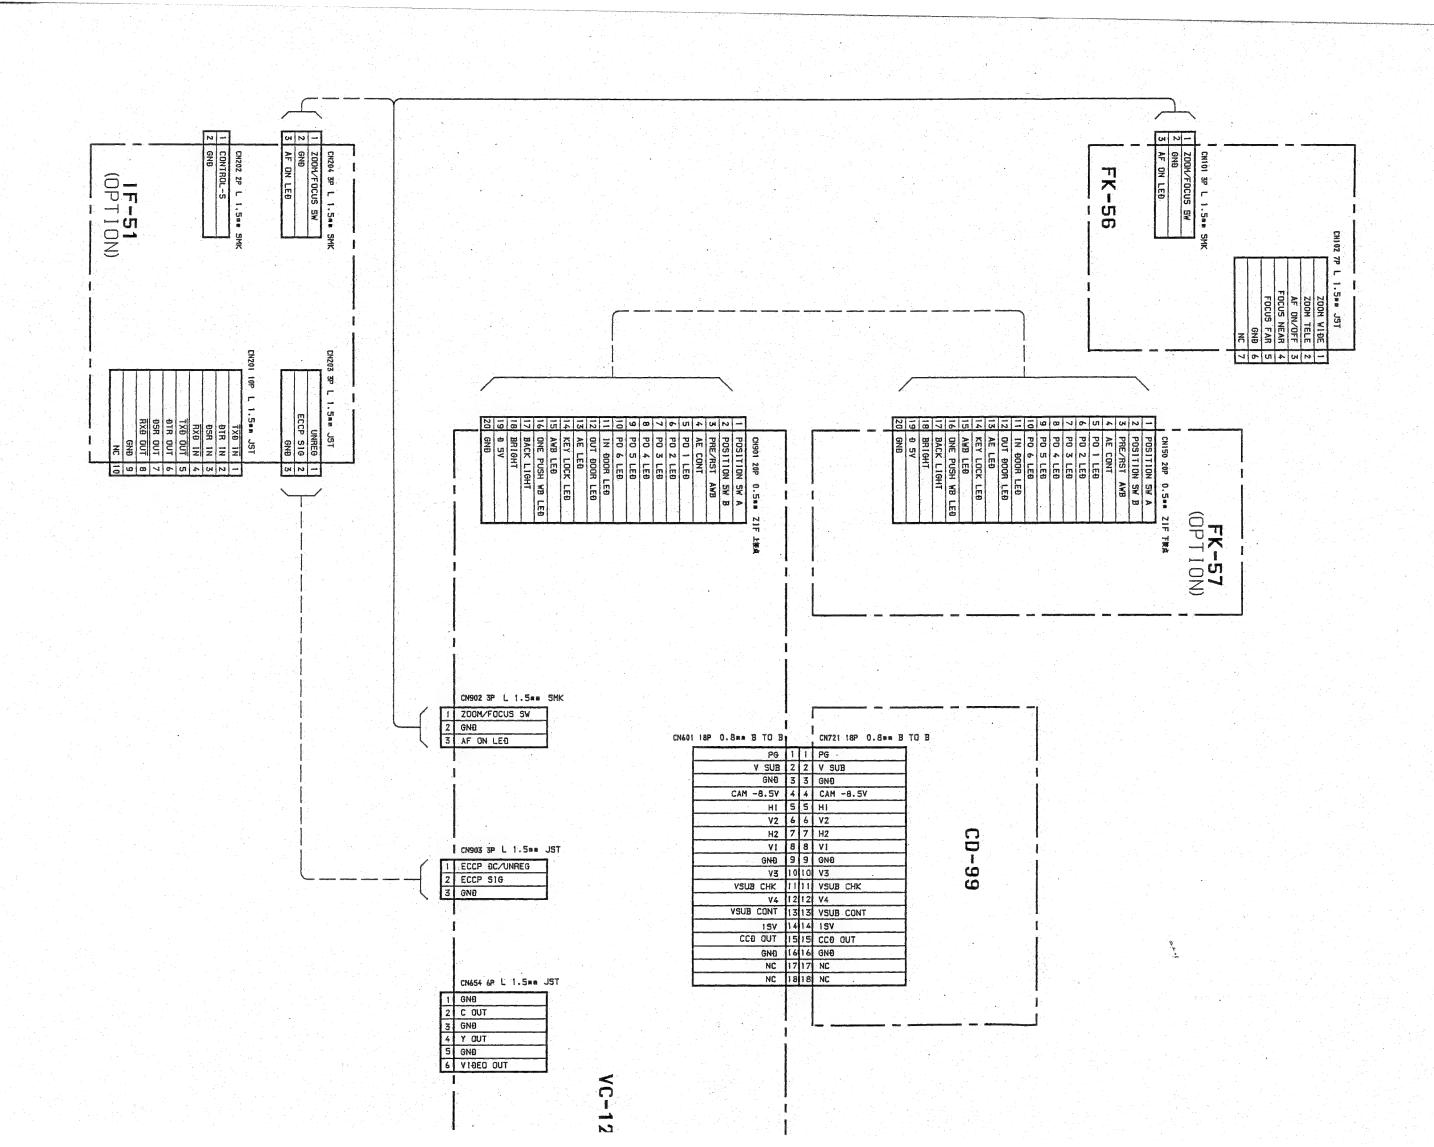

Initializing method:

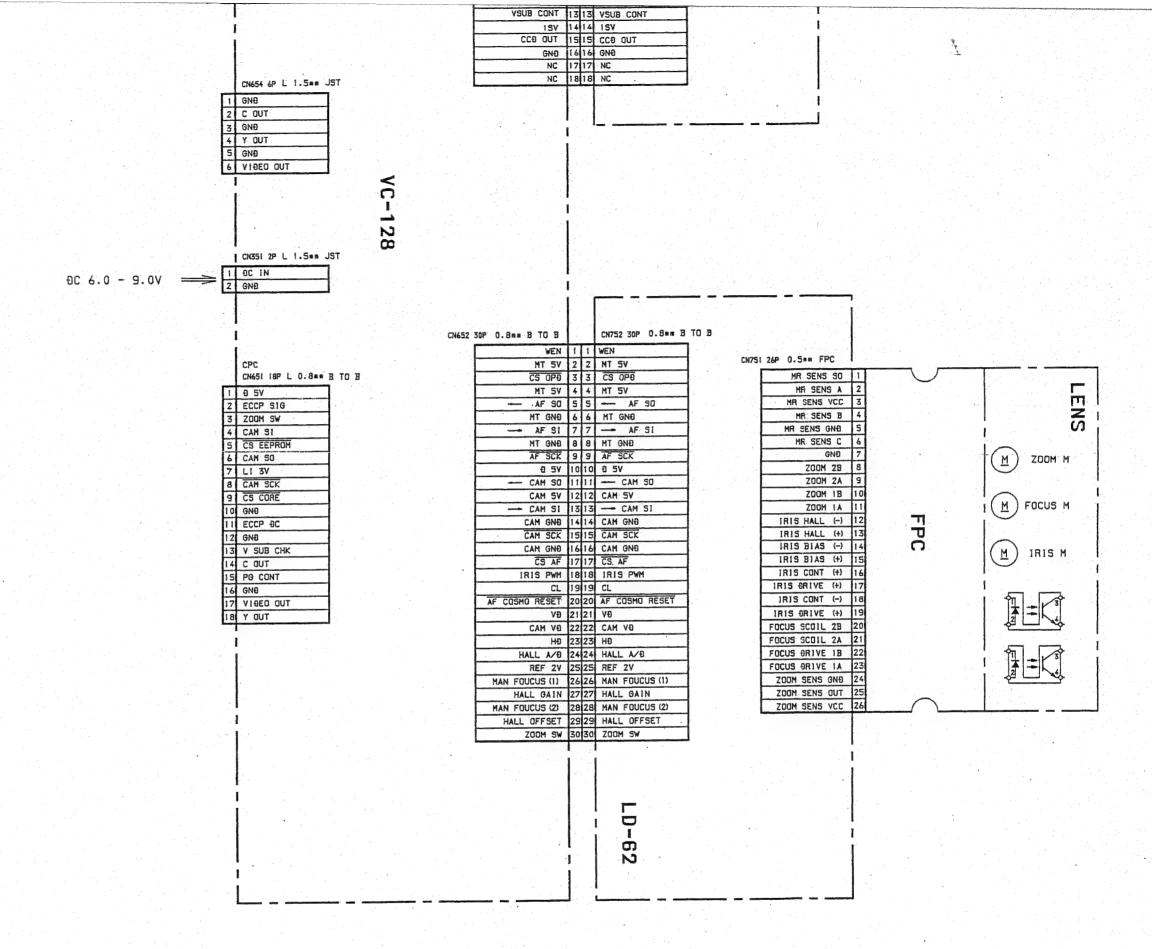

| Order | Page | Address | Data | Procedure | Conditions |
|-------|------|---------|------|--|------------|
| 1 | 1 | 02 | 01 | Turn OFF/ON the main power supply. Check that the data of address 03 becomes 00. | |
| 2 | 1 | 03 | | Press the PAUSE button. | |
| 3 | *-3 | | | Check that the data is 01. (Completion of initialization will be indicated.) | |

Note: Initialize page D only when the non-volatile memory (IC901 on the VC-128 board, EEPROM) has been replaced.

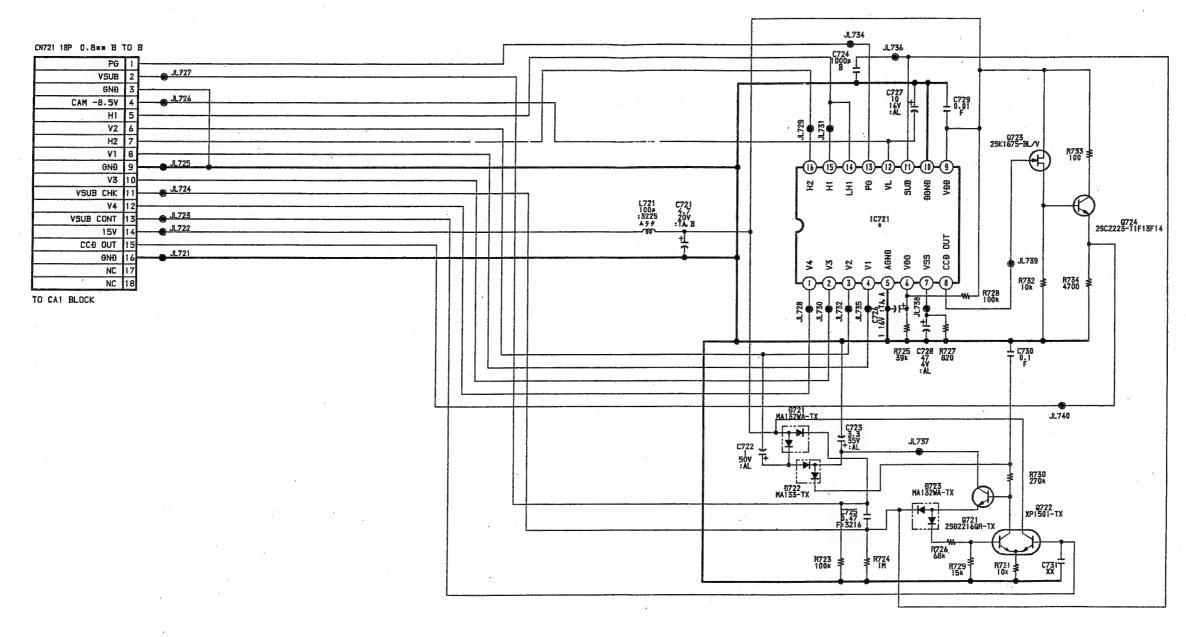

Processing after initializing

| Order | Page | Address | Data | Procedure | Conditions |
|-------|------|---------|------|--|------------|
| 1 | 1 | 02 | 00 | Press the PAUSE button. (Release of initialization mode.) | |
| 2 | 1 | 00 | 01 | Release the protect. (Page D) | |
| 3 | | | | Perform "Page D data modification". • Address Data 12 00→02 14 00→04 • Write the data of addresses 9F to A2 on page F onto addresses 56 to 59 on page D. (Data for the position preset function operation.) • Write the data of addresses 1F to 2E on page F onto addresses E0 to EF on page D. (Data for CCD fault correction.) • After completing the above, adjust the Y and C composite video signals. | |
